Kuehne+Nagel invests in new Container Freight Station in Cambodia

- **New 20,000 sqm facility will more than triple Kuehne+Nagel's Container Freight Station capacity in Cambodia**
- **Strategic location strengthens cross-border connectivity between Cambodia, Thailand and Vietnam**
- **Expanded facility supports customers in the consumer goods industry**

Phnom Penh / KH, August 13, 2026 – Kuehne+Nagel has invested in a new Container Freight Station (CFS) in Phnom Penh, Cambodia. Scheduled for completion in June 2027, the facility will provide more than 20,000 sqm of warehouse space, helping customers manage growing trade volumes and move goods more efficiently within Cambodia and across the region.

Cambodia continues to strengthen its trade infrastructure, with Phnom Penh Autonomous Port handling around 600,000 TEUs and Sihanoukville Autonomous Port approximately 1.3 million TEUs in 2025.

Complementing this growth, the new CFS is strategically located near key transport gateways, including both ports, Phnom Penh International Airport and cross-border road links to Thailand and Vietnam, facilitating cargo movements across the country and supporting regional logistics operations.

David Roussiere, Managing Director, Thailand, Cambodia and Myanmar, Kuehne+Nagel, said: "This investment will more than triple our CFS capacity in Cambodia and strengthen our logistics capabilities in the country. With direct access to key transportation gateways and regional trade corridors, the facility will support customers in the consumer good industry as they navigate evolving supply chains and growing trade opportunities across the region."

Designed for cargo consolidation and handling operations, the new CFS will feature a raised-floor warehouse equipped with loading doors and dock levellers. It will offer a floor loading capacity of five tonnes per square metre and is expected to be certified to ISO 9001, ISO 45001 and ISO 14001 standards.

The facility will also incorporate sustainability features including solar panels, skylight roofing, LED lighting, battery-operated forklifts, water infiltration systems and rainwater management infrastructure.
