Kuehne+Nagel Chile

Kuehne+Nagel Chile strengthens its contract logistics solutions with focus on technology and sustainability

- **Enhancing accuracy and efficiency with advanced warehouse technology**
- **Offering specialised solutions for growth industries like healthcare**

Santiago / CL, November 20, 2024 – Kuehne+Nagel Chile has surpassed 100,000 square metres of warehouse space in the country, a significant increase from 20,000 square metres a decade ago. This expansion strengthens the company's position as a national leader in contract logistics, with specialised solutions for key sectors such as healthcare, consumer, industrial, and high-tech.

Over the past year, Kuehne+Nagel has experienced strong momentum in the fulfilment area, expanding its capacity from 63,000 to 105,000 square metres. This growth included the addition of seven new customers to its healthcare centre, including Synthon and GE Healthcare, and the opening of two new distribution centres: one multi-customer and the other dedicated to the new Casa Ideas operation, both designed according to state-of-the-art standards.

The company stands out in sea and air logistics for its focus on innovative solutions. It is incorporating Artificial Intelligence (AI)- based technologies to further optimise its services and improve the customer experience. In air logistics, Kuehne+Nagel Chile became the leading importer in 2024.

Kuehne+Nagel invested in the latest technology: a new sorter system optimised for direct dispatch to shops and implementing drones for inventory management to maximise efficiency, reduce operating times, and improve Casa Ideas' KPIs. These technologies optimise accuracy and speed in logistics processes and reduce risks in high-altitude employee tasks.

Sustainability is a key pillar for Kuehne+Nagel. Initiatives such as consumption and waste reduction practices through recycling, reuse of materials, and use of clean energy underscore the company's commitment to developing long-term responsible operations in line with global expectations for sustainability in the logistics and transportation industry.

"By strengthening our operational and technological capabilities in Chile, we are reinforcing our commitment to the country by providing efficient, innovative, and sustainable logistics solutions to our customers in various industries," said Esteban Gari, Kuehne+Nagel's General Manager for Chile and Bolivia.
